NEW PRODUCT UPDATE

Did you know?

- With the ever-increasing use of wireless devices, we are seeing increasing issues with 5GHz wireless systems in some areas, due to the number of devices using the same frequency
- An answer to this is to consider using 60GHz devices, less distance but much greater throughput
- In addition, greater support for multiple devices back to one receiver
- Norbain can offer 60GHz through Talychon networks

For more information, please contact your account manager.
